

**City of San Diego
Miramar Water Treatment Plant Upgrade and Expansion
Construction Update June 2010**

Contract B

- Construction began in November 2007 and was substantially completed on February 26, 2010.
- The four new flocculation-sedimentation basins were completed in Contract B. See the July 2009 Construction Update on this website for a photo of a new basin.

Photo explanation: The area where the old basins were located is seen in this photo. The building in the background is the Chlorine Building.

Contract C

- Construction began in May 2008 and is estimated to be completed in July 2010.
- All of the ozone disinfection equipment has been installed and crews have completed the field functional testing of the equipment.
- Crews are finalizing the testing requirement for the start-up of the ozone system and began testing the ozone system on April 19, 2010.
- Ozone will be used to disinfect the water at the plant. See additional information on ozone disinfection on this website.
